

I have bought into xm satellite radio because of the poor quality of local radio in the Atlanta area. The variety of music is extremely limited and the number of commercials is outrageous. There is no consistency in the traffic and weather broadcasts. I have been a C-band owner for ten years and i remember when the NAB got the law passed that I couldn't buy network programming if I was able to receive same from "rabbit ears" or a roof antennae. Now if I want the networks on C-band I have to buy in the central time zone. This is ridiculous that so many companies run to the federal government crying, whining and pitching a fit like a bunch of two year olds when any form of competition comes their way. I have xm satellite radio in my home, car and will soon have it on my motorcycle. Let the NAB improve their product if they want to retain listeners. Please reject petition 04-160. Thank you for your time.
